In 2007, revenue was approximately \$325 million, down from \$430 million in 2006 and \$492 million in 2005.[1] For the full year of 2010, Autodesk said revenue is growing at an annual rate of 18%, as customers work with AutoCAD software on more than 100,000 computers around the world.[2] As of March 31, 2012, revenue was \$1.26 billion.[3] For the full year of 2012, Autodesk reported that its sales reached \$1.52 billion.[4] In 2013, Autodesk reported revenue of \$1.78 billion.[5] In 2012, approximately 54% of AutoCAD users were located in the Americas.[5] The AutoCAD application has received two generations of hardware and software upgrades, and support of the last several releases continues through Autodesk's current, generally annual release cycle. The most recent version, AutoCAD 2017, was released in June 2017.[6] As of June 2016, the annual subscription for AutoCAD was \$1,379.99, plus \$5.99 for the latest version.[7] In addition to its software, the company's CAD division is also active in consulting and training, specializing in mechanical design and prototyping for a variety of industries and projects, including aerospace, automotive, architecture, shipbuilding, engineering and medical. AutoCAD also has a system of academic and government courses in the United States and abroad. History Autodesk AutoCAD was developed by Charles Simonyi, a Hungarian-American software engineer who joined the company in 1982. The name AutoCAD was inspired by a question that Simonyi was asked while working on the original CAD product for the MSX computer in 1981: "What if a CAD system was used by someone who speaks no English?"[8] Autodesk was initially named Afterthought Technology after the company's cofounder, Spencer Thomas.[9] The AutoCAD product was initially developed on a MSX computer, which was introduced in 1979. Simonyi used the then-state-of-the-art MSX to write AutoCAD. The AutoCAD product made use of the Microsoft MSX BASIC interpreter, which used the CP/M operating system. In 1980, Thomas left Afterthought Technology to start his own software company, called Fractal Design, but a few months later he sold his interest in the company to

Run the following command to convert it into a CSR and use it: `openssl req -new -key r_rev.pem -out r_rev.csr` Optionally enter your user name and password when prompted. This command will be printed and you need to save this output as `r_rev.csr`. Now use the following command to send this file to your Autodesk Account Autodesk API Client: `./autocad-api.exe -D -s r_rev.csr -z t_rev.zip --username --password --revision= --createrevision` This will generate the certificate and the ZIP archive file of the certificate. My project contains groups of 2 circles (outer, inner) of the same size and they can have any radius. The topmost circle has a fixed radius of 50px. The center circle has a radius that can be changed depending on the users wishes. The inner circle has a fixed radius of 25px. When the user moves the mouse the path is now moveable. I decided to take this approach as it means that when the user releases the mouse the path is fixed to the actual position of the mouse. When the user moves the mouse the path is now moveable.
