MyOra Crack + X64

===== MyOra is an easy-to-use, snappy piece of software that provides users with the possibility to monitor their Oracle database and fast, to run queries, and to view info on the database's performance in real time. The application does not require installation and users can take advantage of its capabilities by extracting the content of the downloaded archive and running the included executable file. MyOra comes with a MDI (Multi Document Interface) framework designed to handle multiple sub-windows that have been opened at the same time. Moreover, the software comes with support for multiple connections to the same database or to a different one. The program provides users with the possibility to open the desired number of Performance Monitors, Session Managers, or SQL Editors and can view all of them on the program's main window, organized either horizontally or vertically. With the help of MyOra, users can take advantage of real-time performance monitoring capabilities using graphs and charts. Moreover, they can use interactive 3-D bar charts to view the top 5 SQLs or top 5 Resources. The software comes with a number of six interactive graphs designed for monitoring database activity. It also includes tablespace used/free pie charts, session monitoring, and an SQL Editor with auto complete features.

Main Features: ===== - Customize the application's window size - Load up to 6 Performance Monitors, 6 Session Managers, or 6 SQL Editors - Switch among Performance Monitors, Session Managers, or SQL Editors quickly - Use the Help file and/or the online online manuals - View the program's graphical reports - Use the interactive 3-D bar charts to view the top 5 SQLs or top 5 Resources - Use the Interactive menus and the keystrokes for simple operations - Connect to a single database or multiple databases - Export to Microsoft Excel for further analysis - Real-time database monitoring and activity graphing - Open/Save/Load a report - Automatic detection of Oracle and PC databases - Session/Connection manager for every user - Connect to a single or multiple database and run multiple queries - Presets for Performance Monitors, Session Managers, and SQL Editors

MyOra is an easy-to-use, snappy piece of software that provides users with the possibility to monitor their Oracle database and fast, to run queries, and to view info on the database's performance in real time. The application does

What's New In?

Multiple monitors can be easily managed within a single window, plus a monitor can be closed and re-opened. MyOra can also analyze data on a large number of servers, on a single server, or on specific databases, so you can easily drill down into a specific issue. MyOra provides users with an interactive query performance monitor that includes a number of widgets and graphs that help to understand your Database or ORACLE environment. The program is extremely easy-to-use, which means that no training is required. MyOra can also analyze data from the servers, your databases or specific tablespaces to obtain detailed stats of your servers, your databases, or your specific tablespaces, as well as compare those stats to your best configuration. With the help of MyOra, users can take advantage of a number of real-time interactive graphs, and charts. The application will automatically find the best suitable Graph based on the data being analyzed, the date range, or the time periods.

Exclusive PRO/ENGINEER benchmark The program is completely compatible with all databases that use the Oracle/Sybase ODBC driver, which makes it very useful for those using Microsoft Access as their database client. The benchmark generates information about the performance and status of SQL-PLUS and SQL-PLUS/UI on your database. To begin with, the benchmark can be used to help you quickly determine the performance of your database and SQL-PLUS in general. At the end of the benchmark, it is important for you to compare the total time taken to run the benchmarks. Excellent SQL editor The SQL editor that comes with MyOra has a number of functions that make it easy to analyze any database, including Oracle, SQL-PLUS, SQL-Plus, SQL Developer or SQL*Plus. MyOra provides you with excellent real-time SQL editors, with auto complete, that automatically find the best suitable SQL editor based on the selected database. In-depth analysis of performance MyOra allows users to understand the performance of their databases and to run queries to understand what causes the problems. The program can help users to:
