What's New In Tembria Server Monitor?

Businesses depend on mission-critical servers that are always on and always working. Customers depend on them to provide reliable and secure access to their network. But it's all too easy to overlook system health, especially when a server is simply running in the background. Server Monitor saves your business from the downtime and lost productivity that can result from a server outage. Server Monitor catches problems before they happen and warns you when problems arise so you can troubleshoot before service interruption and data loss occur. Features include: * Alerts you when problems occur * Sends alerts to your computer desktop (requires Internet Explorer or Netscape version 6.0 or later) * Shows your CPU utilization in order to detect real-time performance problems * Sends you a daily report so you can monitor your business activity * Reliably and automatically detects and reports on potential problems * Automatically configures port, address, and IP data from most systems * Runs on a stand-alone Windows system or a network server * Works with most software such as: Internet Explorer, Netscape, Outlook, QuickBooks, and WPSite

How to install Tembria Server Monitor: The program is available for download from the Tembria Software Company website. Installation instructions are included in the documentation. Please visit the Tembria Software website for the latest documentation. Tembria Server Monitor 1.0 Requirements: Windows 95/98/NT4/2000/XP operating system Microsoft.NET Framework 2.0 and later
