Star Syslog Daemon Lite Keygen For (LifeTime)

The Star Syslog Daemon Lite is a Syslog server and can be used to replace Windows Syslog. It runs on any windows platform that can run Internet Explorer. It is a complete replacement for the default Windows Syslog. For Windows XP users, Star SysLog Daemon Lite can run as a service without Internet Explorer. However, it is recommended to use IE to browse the log files from local network, as the program has a limited browsing capability to the log file. Features: Easy to setup and run. No installation needed. Can be run as a service with Internet Explorer (IE). Includes a Windows resource file (registry entry) to start the service as a Windows service. Scales well for any number of devices receiving Syslog messages. Prints filter conditions if any when the log file is opened. Filters log messages by IP address, Host name, and Syslog message content Runs as a service, so it can be accessed and controlled remotely. Automatically logs failed messages to an archive log file for a specified amount of time. Minimizes to the system tray and can be run on a separate workspace. Supports a network wide deployment of multiple machines. Any Windows program can connect to the daemon to view, read and/or process log messages. Supports autodetection of IP address and host name. You can schedule the hours of operation of the daemon. You can set up the daemon to not forward messages to the same host twice. You can set up the daemon to not forward messages to the same host more than a specified number of times. You can enable or disable the daemon to forward messages to the same host immediately. You can enable or disable the daemon to forward messages to another host at specified intervals. You can enable or disable the daemon to automatically send Syslog messages to another host when the daemon receives a Syslog message. You can set up to have the daemon notify you when the log file reaches a certain size. You can automatically remove the daemon when you log out of Windows. You can set the daemon to remove the log

What's New in the?
