While onscreen, you can synchronize the placement of comments, notes, or other objects to your drawing as you edit. This allows you to use markup while you draw and edit. Add comments, notes, or data-driven (tags) annotation to your drawings. Comments, notes, and tags are read-only so they won't slow down your design work. Add text and data objects from any application (such as Excel, Word, PowerPoint, and other web-based tools) to your drawing directly. Inline shape or line art editing: Make edits directly on a line or shape that will stay inline as you draw. This is especially useful for aligning the parts of a complex assembly. Add or remove faces on a shape so that the shape is a closed polyline. This is useful for inserting chamfered edges in a circular profile. Find and place other parts on the drawing from other sheets. Link, move, or snap to objects in your drawing. You can also import and use 2D and 3D models. Compare: Compare your drawing against other drawings or printouts, and make changes directly in AutoCAD. The Compare Markup feature allows you to see the differences and similarities in any two drawings. Use it to quickly compare drawings and find errors and revision opportunities. You can make changes directly in the drawing. This is especially useful to edit comments, notes, or the background color of a shape. Export to DWF (dwg): Export AutoCAD to DWF (dwg) format, directly from the Markup Assist panel. This is particularly useful for making PDF exports of your AutoCAD drawings for presentation to your clients or clients. If you import a DWF (dwg) file in AutoCAD, AutoCAD will open that drawing as a draft from where you imported it. When opening a DWF (dwg) file, if you are prompted to upgrade to the latest version of AutoCAD, you can select Cancel to open the file without upgrading.
