The prevalence of stress is increasing in the elderly. Factors like anxiety, low self-esteem, environmental surroundings, and loss of social participation can contribute to stress. Stress related mental health problems such as depression, anxiety, and disturbances in sleep, are also increasing in the elderly. Epidemiological studies have shown associations between stress and age-related mental health problems such as depression and chronic diseases. The author reviews factors related to increased stress in elderly persons, and discusses ways of coping with the occurrence of stress in this age group.Oral delivery of human milk using wettable powders: an in vitro and in vivo study. The potential of a novel human milk product consisting of freeze-dried milk reconstituted with a very small amount of fluid was investigated in an in vitro model. The powder was administered from a modified baby feeding bottle, suspended in milk or water and shaken vigorously to get a suspension of uniformly distributed particles 0cc13bf012
