The metabolic syndrome, a state of heightened risk for chronic diseases such as type 2 diabetes and cardiovascular disease, afflicts millions of Americans. The precise mechanisms underlying the syndrome are not well established, but it is commonly associated with insulin resistance and hyperglycemia. The adverse risk factors for cardiovascular disease associated with the syndrome, including hyperglycemia, dyslipidemia, hypertension, and/or central obesity, and its precursors (e.g., inflammation and endothelial dysfunction) lead to cardiovascular disease. Physicians have sought to reduce risk factors and prevent chronic disease by using therapeutic regimens that include diets low in saturated fats and high in dietary fiber
