Author's Note: If you're interested in learning how to use AutoCAD and think you might like to learn how to use AutoCAD for that purpose, I highly recommend my book, CAD Without Fear. Summary of AutoCAD's Features If you're using AutoCAD and need a quick summary of AutoCAD's features, look no further than AutoCAD's help file. (Click here for a link to the AutoCAD 2016 user manual). If you're using AutoCAD 2016, the following sections are relevant to your current version. Command Menus These are the menus that appear when you click the mouse and/or press a keyboard command key. Command menu 1 Command menu 2 Command menu 3 Command menu 4 Command menu 5 Command menu 6 Command menu 7 Command menu 8 AutoCAD Commands Commands are the AutoCAD actions that you can perform by clicking on various objects on the screen. AutoCAD comes with over 8,000 commands, and they are listed below. You can use a few commands to achieve almost anything you want to do in AutoCAD. I recommend you familiarize yourself with all the possible commands first. Note: Although this list of AutoCAD commands has over 8,000 entries, only a few are listed above. The remainder are listed below. AutoCAD Commands Menu Commands # Key Entry Description 1.5/8T - AutoCAD Tries to do something to the selected object. Automatically invokes any active functions that the selected object contains. 1.7/4D - AutoCAD Draws 3D objects. 1.8/7T - AutoCAD Traces a line or circles on the current layer. 1.9/13W - AutoCAD Extrudes a line or circles along a plane. 2.6 - Zoom Extends the selected object by zooming in. 2.7 - Zoom Extends the selected object by zooming out. 2.9 - Zoom Locks the selected object and prevents zooming. 2.8 - Zoom Cuts the selected object off. 2.10 - Zoom Cuts the selected object off. 2.11 - Zoom Sets the current layer and then increases or decreases the scale by 1. If you have the Measure object, this also sets the scale. 3.1 - Zoom Locks the selected object and

The most common forms of customizing AutoCAD are the addition of custom commands or macros (the latter using the Visual LISP API), and plug-ins. Use of 3D APIs 3D API is a collection of programming libraries, in order to provide 3D functionality in AutoCAD. It consists of a set of command-line programs, AutoLISP scripts and an API. The 3D API scripts enable: automatic generation of construction drawings (based on CAD data); simulation of those drawings; automatic design of detailed drawing; more realistic representation of cross-sections (plane and volume view); automatic design and generation of blocks; automatic recognition and assignment of layers to cross-sections; automatic generation of 3D cut-outs from 2D drawings; automatic conversion of 3D blocks and cross-sections to 2D drawings; automatic generation of construction drawings; automatic generation of visualization (or animation) of construction drawings; automatic generation of 2D and 3D views of objects, surfaces and layers; automatic generation of construction drawings based on 3D model data; automatic generation of 2D and 3D plots based on 3D model data; automatic generation of 3D blocks and blocks based on 3D model data; animation of 3D blocks; automatic generation of sections and angles; automatic generation of 3D views of arbitrary geometries, including surfaces; automatic generation of 3D object data (catalogs, geometries and parts); automatic generation of all necessary 2D and 3D commands for the generation of construction drawings, such as sections, types, color schemes, dimensions, notations and point and line types; automatic generation of all necessary 2D and 3D commands for the simulation of construction drawings, such as sections, types, color schemes, dimensions, notations and point and line types; automatic generation of all necessary 2D and 3D commands for the generation of 2D views of construction drawings, such as sections, types, color schemes, dimensions, notations and point and line types; automatic generation of all necessary 2D and 3D commands for the generation of 3D views of construction drawings, such as sections, types, color schemes, dimensions, notations and point and line types; automatic conversion of 3D blocks and cross-sections to 2D; History The 3D API tools were created from 2005 by Erik Hartman. ca3bfb1094
